REACH Declaration

As a **manufacturer of precision steel tubes**, under Regulation (EC) No 1907/2006 (REACH), we are primarily a producer of articles and, insofar as we use substances or mixtures, a downstream user. Our input materials and the precision steel tubes supplied by us are generally articles within the meaning of the REACH Regulation, as amended from time to time.

There is no general registration obligation for substances in articles. However, specific registration, information or notification obligations may arise if the statutory conditions established for this purpose are met.

If an article supplied by us contains a substance of very high concern (SVHC) included in the current REACH Candidate List above the statutory concentration threshold, we provide the information required by law to enable safe use. Corresponding consumer requests are answered within the statutory time limit. The current Candidate List is available on the ECHA website.

We assess the information available to us from our input material and auxiliary material suppliers and, on this basis, fulfil the applicable information and notification obligations towards our customers and the competent authorities. Where the statutory conditions are met, this also includes the relevant REACH notification obligations and reporting obligations to the SCIP database.

Safety data sheets are generally intended for substances and mixtures. For articles such as precision steel tubes, the information required by law for safe use is provided in the prescribed form.
Furthermore, we comply with the applicable restrictions under the REACH Regulation. MPT must be informed at an early stage of any special or customer-specific uses so that any resulting legal restrictions and additional product requirements can be reviewed and contractually agreed.

Based on the supplier information available to us at the time of issue and our current assessment, we confirm to the best of our knowledge that the precision steel tubes supplied by us do not contain any SVHC included in the applicable REACH Candidate List above the statutory concentration threshold per article.
This declaration applies to the products as supplied by MPT and in their condition at delivery. It will be reviewed in the event of relevant changes to statutory requirements, the Candidate List, product composition or the supplier information available to us. The recipient remains responsible for assessing its specific use and the requirements applicable thereto.
